

## ON ANGELIC GLORY

Junior Researcher Zyn Kiryu (ARCH-IVAL S-19)  
0011-0031-003I-0025-0007-1984 (C:D1)

**WARNING: THE FOLLOWING REPORTS  
ARE LEVEL 2/S-Ⓢ CLASSIFIED**

---

ANY FURTHER ATTEMPTS TO ACCESS MATERIALS OR RELATED MATERIALS  
WITHOUT PROPER CLEARANCE WILL LEAD TO IMMEDIATE DISCIPLINARY  
ACTION, AMNESTICIZATION, AND POSSIBLE TERMINATION OF EMPLOYMENT.

**ABSTRACT:**

Object (SCP-093) found 30 Jan 1968 on the shore of the Red Sea by independent GOI [Casa de Negustori]<sup>(1)</sup> enables connection to previously uncharted (pataphysically abtheoretical<sup>(a)</sup>) universes. Chances of Foundation influences in these universes (hereby designated instances 093-A through 093-D) slim to none, suggesting a significant departure from Collinsworth's Proposal<sup>(2)</sup>.

Hume-Klein (Hume Unit/HU) residual analysis is minimal, but the object displays numerous significant Akiva spikes consistent with those recently mapped by MTF Delta-4 in Los Angeles (DERIVATIVE 003I-0025-0007-1984)<sup>(4)</sup>. This suggests an overlap with the Bloom symptoms of Lily's Proposal<sup>(5)</sup>, further implying said source of Akiva Radiation is the result of ensuing XK-class apocalypse enabling the activation of SCP-2000.

CK-class specification of event 01XK-003I-0025-0007-1984 is pending further analysis of D1-A<sup>(6)</sup>.

**SCP-093:**

SCP-093 is a disc carved from a red stone composite, with circular engravings and unknown symbols carved at 0.5 cm depth around the entire object. Deeper cuts are present on SCP-093 with a depth of 1 to 1.5 cm. SCP-093 is 7.62 cm in diameter and fits comfortably into most palms without abrasion. SCP-093 will change hue when held by a living individual.

The colors taken by SCP-093 are still being researched to establish a link.

Connecting SCP-093 to a mirror will create an instance of SCP-093-1. SCP-093 reacts in a "sticky" (non-magnetic) manner to any mirrored surface. Experiments currently underway to measure the requisite glossiness composing a requisite 'mirrored' surface by the object.

**Object Class:** Euclid

Not enough information to properly evaluate as Safe.

**Special Containment Procedures:**

Lead-lined box. All materials used in containment kept non-glossy. 24/7 surveillance.

**Research Procedures:**

Vacuum chamber. Heavy guard. Non-metallic manipulators. Primed explosives. 5-stage bulkhead system. Risk to SCP-2000 considered minimal.

## **SCP-093-1:**

A portal surface created by SCP-093. Connects to a finite amount of previously unmapped and undefined universes. Portal is categorical (color-based) based on the object holder. Observed: Yellow (A), Green (B), Violet (C), and Blue (D). Observed phenomena include an office space, a farmhouse, a downtown district, and an unknown grassland respectively. Exploration has not yet been attempted.

All observed seem abandoned by many years, showing signs of environmental erosion and natural reclamation. Additionally, the office space and downtown district contain technology considered Gen1+ or Gen2+ by the UNGOC.

Testing available to S-17 up to [INVALID DATE] has suggested ways to fine-tune the temporal vector of a given SCP-093-1 instance by shunt-arresting SCP-2000's bloom interaction. See D1-B<sup>(7)</sup> by Kain Pathos Crow.

## **Un Avis Préliminaire on SCP-093-1:**

My team, it is ready to work. We may begin the long-term studies with the time given to us and adjust a time signature, yes, with the declassified details<sup>(7)</sup>.

But I do not like this risk. We do not know where it is we go. What it is we watch. We do this because you say it is the way forward, but it is dangerous. With so few bodies in S-0, we can only test for so many colors. What could we do with a hundred more volunteers? A thousand? During this year we have nothing. And you walk forward.

To go through this portal - it is a feat most reckless. We are working with things that should not be possible, even in theory. My education, all of it, begs you to wait.

Researcher Élisabeth-Célestine de Beauvoir

**ANGELIC GLORY:**

One of the items recovered by MTF Delta-4 "Greens" alongside Researcher Gracchus: a 12.6kg gold ingot inscribed with:

**MINT-ANG-GLORY 19/02/2016**

This item reflects nearly identical Akiva trace-frequencies to those recorded by Research Team Θ-1 outputted (latently) by instances of SCP-093-[A-D].

Item has no SCP designation pending anomalous phenomena, but remains in evidence at Site-Θ.

Item alongside SCP-8219 "Colt's Colt" recovered from POI-6461, detailed below. SCP-8219 does not display similar Akiva characteristics, ruling out POI-6461 from having personally procured these items. Analysis on limited paperwork and remaining evidence from POI-6461 and connected individuals underway (contact Assistant ~~Fitz~~ Adam for updates).

**Person of Interest File #I-6461/01**

**Legal Name:** Oswald Klein

**Aliases used:** "Ozymandias" (rumored)

**Associated Groups of Interest:** UNGOC, GOI-16  
"MC&D Ltd.", GOI-1621<sup>(8)</sup>

**Reason for monitoring:** POI direct descendant to former joint GSC<sup>(9)</sup> head scientist Dwight Klein. POI-6461 alongside two siblings (POI-6162, POI-6463) underwent experimental trials during infancy for compatibility of (now-declared) SCP-████ driven 'Neural Amplifier' device.

Following Dwight Klein's murder, POI-6161, POI-6162, and POI-6163 were amnestized alongside their mother, and released across the country from any memetic triggers.

~~**Course of Action:** Monitor communications and behavior through standard channels, detain and control if behavior becomes erratic or unsustainable for further analysis or SCP-000 standards.~~

**Course of Action:** Do not monitor. Case is being handled by Dr. Vahlen of UNGOC PTOLEMY. Recommend no-contact.

**Priority:** Medium

**Status:** ~~Currently living~~ Lived in Watts, Los Angeles (CA, USA). Contact with GOI-1621 confirmed evening July 22nd, 1984. Restraint order received from UNGOC early morning July 23rd, 1984. POI-6461 observed entering a GOI-16 event evening July 24th, 1984. Witness interviews conducted by local friendly 'G. Barkley' suggest unrealistically exemplary strength competition performance by POI-6461, in addition to winning a bidding war for █████ [SCP-105] by donating their own services - likely a death sentence. (Note: Erroneous)

POI-6461 eliminated by MTF Delta-4 under command of Researcher Gracchus shortly after initial phase of 01XK-003I-0025-0007-1984. POI-6461 is noted as a clearly highly trained soldier with unknown military background despite Foundation monitoring suggesting otherwise.

Further Foundation records were turned over and expunged per UNGOC request.

**1:** Casa de Negustori (ENG: House of Merchants) is a known minor GOI (GOI-992). Came to Foundation notice in March 1968 after two-dozen members held Provisional Site-608 under siege for six hours, including incurring multiple casualties of response force Epsilon-11 "Nine Tailed Fox" despite posthumous research revealing little to no military background of the assailants. Of additional significance, the futuristic equipment used by members of GOI-992, including energy weapons, self-destructed before recovery was possible. Attempted capture of live GOI-992 members was met with suicide. Objective of GOI-992 attacking Provisional Site-608 unknown, though Lord Blackwood noted that the weapons used by the assailants sounded 'awfully familiar', and asked if any members of Epsilon-11 'got any blood on them'. He has refused further comment.

**2:** Senior Researcher Collinsworth's proposal that all known universes have an SCP Foundation (or equivalent). Supported by Dr. McDoctorate's 'Monkey Heat Death' theory.

**3:** MTF Delta-4 "Greens" mapped Akiva to an offshore facility operated by the FBI Unusual Investigations Unit (GOI-009) in collaboration with the United States Department of Defense. Exponential spikes observed in said radiation correlate precisely with the activation of the Bloom (Lily's Proposal). Ambient signatures are a match to each portal instance (A-D) of SCP-093.

**4:** Iota Timeline, Third Derivative, 25th July, 1984. Timeline has since collapsed to Second Derivative.

**5:** [REDACTED].

**6:** D1-A has been placed in a Scranton Box to prevent manipulation. D1-A is a population census taken 1965 by the Foundation in conjunction with the UNGOC that reports the world population at roughly 6.1 billion persons. Population observed at the time of 01XK-003I-0025-0007-1984 (July 25th 1984) numbered roughly 4.7 billion persons. D1-A additionally suggests an Earth of roughly 52,000km in circumference, significant landmass abnormalities, at least one additional continent, and numerous supercities. Thaumaturgical analysis establishes clear, focused intent on D1-A's creation, as well as confirming its origin as 003I-0005-0009-1965. Significantly, D1-A was found in a locked Scranton Box, while all other SCP Foundation files had transitioned to SCiPNET. Researching possible causes, effects, pataphysical sustainability, and any form of internal logic concerning D1-A is currently the primary goal of

the Department of Temporal Anomalies under Dir. Eliza Cosell (TEMP-ANOM SITE-19).

**7:** [REDACTED] per Director Sophia Light.

**8:** GOI-1621 "Timely Men". Contact Director Eliza Cosell (TEMP-ANOM SITE-19) for more details.

**9:** The GSC (Global Science Coalition) was phased out as a conglomeration measure by parent organization UNGOC shortly after the death of Josef Stalin (July 6th, 1953). Previously, the GSC consisted of elite scientific and task force personnel from the Foundation, UNGOC, GOI-003 "GRU-P", GOI-004 "The Church of the Broken God", and limited cooperation from GOI-016 "MC&D Ltd" dedicated to containing [REDACTED] during the Seventh Occult War.

**A:** 'Monkey Heat Death' proposes a functionally finite amount of universes due to low-slope asymptotic complexity in 'further' derivatives.

Additionally, all observed universes 'downstream' of 001A "Prime" contain instances of the SCP Foundation in Noospheric mapping. SCP-093-[A-D] do not have this, suggesting either (a) an unknown effect is breaking universes from derival expectations, or (b) 'Monkey Heat Death' is in need of re-evaluation. Senior Researcher Dr. McDoctorate (PATA-PHYS S-87) has been contacted through SCiPNET, however only S-1, S-17, and S-19 have remained in [limited] contact thus far. (Note: Erroneous)
